

DUROLANE[®]
hyaluronic acid, stabilized single injection

Live in the moment

Help **relieve painful knee osteoarthritis** (OA) with a single-injection treatment¹

1 Doctor's Visit

1 Powerful Injection

26 Weeks of Pain Relief²

**Spend more time
doing what you love**

What is HA?

HA is a molecule found naturally throughout the human body and is an important component of synovial fluid, a thick substance that lubricates joints.

Synovial fluid enables joints to move easily and freely while also absorbing shock in the joint that occurs during activity. This fluid protects bones and other joint tissues from injury and disease.

Did you know HA injections:

- Can relieve OA knee pain for up to 6 months²
- May delay the need for knee replacement surgery⁴
- Are a natural, non-opioid therapy

How Do Hyaluronic Acid Treatments Work?

Injected directly into the knee, HA treatments restore the shock-absorbing properties of the synovial fluid, relieving OA knee pain and reducing the need for painkillers (NSAIDs and analgesics).^{1,5}

Is HA Right for Me?

You may be a good candidate if you have been diagnosed with mild to moderate knee OA and are:

- Not getting adequate pain relief from oral medications, physical therapy, or steroid injections
- Not able to maintain regular joint movement because of growing stiffness and pain
- Not engaging in the regular activities you enjoy because of joint pain, loss of strength, or decreased mobility

Benefits of DUROLANE

- One convenient injection
- Delivers powerful OA knee pain relief for up to 6 months²
- Improves physical activity and quality of life in as early as 2 weeks, for up to 24 weeks⁶

Is DUROLANE Right for Me?

If you are an OA patient who is not getting enough pain relief from oral medications, physical therapy or steroids, DUROLANE may be right for you.¹

**Speak with your doctor about
HA treatment with DUROLANE.**

Is There Any Reason Why I Couldn't Have a DUROLANE Injection?

You should not use DUROLANE if you have infections or skin disease at the injection site. DUROLANE has not been tested in pregnant or lactating women, or children.¹

Full indications and contraindications information can be found in product labeling on DUROLANE.com or by contacting customer service at 1-800-836-4080.

Living with Knee Pain?

If you have knee OA, you may experience pain doing everyday activities such as:

**Don't grin and bear it,
hyaluronic acid (HA) could help.**

HA treatments can provide up to 6 months of OA pain relief, with minimal risk of complications.¹⁻³

Summary of Indications for Use:

DUROLANE is indicated for the treatment of pain in osteoarthritis (OA) of the knee in patients who have failed to respond adequately to conservative non-pharmacological therapy or simple analgesics, e.g. acetaminophen.

Do not inject DUROLANE in patients with knee joint infections, skin diseases, or other infections in the area of the injection site.

Do not administer to patients with known hypersensitivity or allergy to sodium hyaluronate preparations. Risks can include transient pain or swelling at the injection site.

DUROLANE has not been tested in pregnant or lactating women, or children.

Full prescribing information can be found in product labeling, at www.DUROLANE.com, or by contacting Bioventus Customer Service at 1-800-836-4080.
